

From the depth of the oceans to the most arid deserts, turtles have existed virtually unchanged on our planet for millions of years. Come discover the diversity and resilience of this incredible group of reptiles

Themes

This exhibition covers the incredible diversity of turtles including how they live, eat, and their many different shapes, sizes, and textures. Your visitors will learn that turtles have remained largely the same for over 200 million years, meaning they've witnessed dinosaurs come and go, mammals emerge, and the entirety of human history! We also dive into how we all have a part to play in protecting this vital and vibrant species.

Key Components

Tactile Interactives:

- Phoebe project at each animal habitat
- Bas-relief turtle components and features
- Q & A Flip panels
- Climbable sculptures
- Diamond back terrapin
- Leather back sea turtle
- Male and Female Galapagos tortoises
- Video interactive
- Live daily shows and animal encounters
- Fully staffed
- Bilingual exhibitions

Potential Featured Animals*

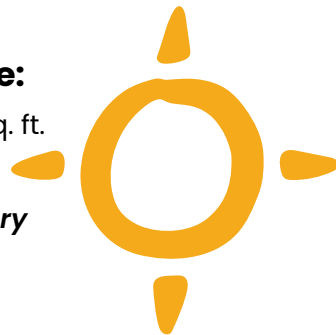

- Leopard tortoise
- Radiated tortoise
- Red eared slider turtle
- Common box turtle
- Diamond back terrapin
- Spotted turtle
- Rote island snake neck turtle
- Burmese star tortoise
- Big headed turtle
- Asian soft shell turtle
- North American wood turtle
- Pancake tortoise

**Featured animals vary
by venue and gallery size*

Exhibition Size:

5,000 - 12,000 sq. ft.
